

INDEPENDENT VERIFICATION STATEMENT

Annual Greenhouse Gas Emissions Report, Reporting Year 2025

Statement reference	KVS-25-094
Date of statement	10 March 2026
Operator	Dunes Energy Company
Facility	Eastern Dunes Field Central Processing Facility 1 (CPF-1) (EAD ID AD-OG-0412)
Reporting period	1 January to 31 December 2025
Emissions report	DEC-EDF-CPF1_EAD-MRV-Emissions-Report_RY2025.xlsx (final)
Monitoring Plan	DEC-EDF-CPF1-HSE-MP-001 Rev 4.0
Criteria	EAD Technical Guidance for MRV; approved Monitoring Plan; ISO 14064-3:2019
Level of assurance / materiality	Reasonable assurance / 5% of total reported emissions
Verification team	Leila Haddad (Lead Verifier); Arjun Menon, CEng (Technical Expert, oil & gas); Sophie Laurent (Independent Reviewer)
Notification to EAD / site visit	18 June 2025 / 23 September 2025

1. Scope

CO₂ and CH₄ emissions from all source streams (SS-01 to SS-04) and methane sources (M-01 to M-09) described in Monitoring Plan Rev 4.0.

2. Emissions covered by this statement

ID	Source	Verified (t CO ₂ unless stated)
SS-01	Fuel gas	156,519
SS-02	HP flare gas	59,786
SS-03	LP flare gas	6,209
SS-04	Diesel	3,337
CH ₄	Methane (in scope)	601.5 t CH ₄ = 16,842 t CO ₂ e
Total verified emissions		242,693 t CO ₂ e

3. Verification activities

- Remote review of the Monitoring Plan, GHG workbook and previous correspondence with the Agency; strategic analysis and risk assessment.
- Site visit on 23 September 2025: interviews with the GHG & Energy Lead, Instrumentation Supervisor, Laboratory Coordinator and Production Accounting Engineer; inspection of FT-3001, FT-5101 and FT-5102.
- Data testing: PI historian totals traced to the GHG workbook for 3 months per source stream; recalculation of all source streams; sampling of 60% of diesel invoices.
- Cross-checks of meter totals against the production allocation gas balance; review of calibration certificates and gas analyses.

4. Findings

ID	Classification	Description	Status
F-01	Misstatement, corrected	M-06: pneumatic device count updated from 44 to 42 after field verification of the device inventory.	Closed
F-02	Observation	SS-04: diesel is monitored at Tier 1 using supplier invoices. Tank level gauging would allow Tier 2.	Open (improvement)

5. Opinion

Unmodified opinion. Based on the procedures performed and the evidence obtained, the CO2 and CH4 emissions stated in the operator's emissions report for the period 1 January to 31 December 2025 are, in all material respects, fairly stated in accordance with the verification criteria and free from material misstatement.

6. Recommendations

- 1. Consider tank level gauging for diesel to move SS-04 to Tier 2.
- 2. Continue quarterly LDAR surveys and extend Hi-Flow quantification to all leaks above 0.5 kg/h.

This statement is issued to Dunes Energy Company for submission to the Environment Agency – Abu Dhabi and relates only to the facility and period stated. The operator is responsible for the preparation of the emissions report.
